

Topic/Skill	Definition/Tips	Example
1. Translation	<p><b>Translate</b> means to <b>move a shape</b>. The shape does not change <b>size</b> or <b>orientation</b>.</p>	
2. Column Vector	<p>In a column vector, the <b>top</b> number moves <b>left (-) or right (+)</b> and the <b>bottom</b> number moves <b>up (+) or down (-)</b></p>	<p><math>\begin{pmatrix} 2 \\ 3 \end{pmatrix}</math> means '2 right, 3 up'  <math>\begin{pmatrix} -1 \\ -5 \end{pmatrix}</math> means '1 left, 5 down'</p>
3. Rotation	<p>The size does not change, but the <b>shape is turned around a point</b>.  Use tracing paper.</p>	<p>Rotate Shape A 90° anti-clockwise about (0,1)</p>
4. Reflection	<p>The size does not change, but the shape is '<b>flipped</b>' like in a <b>mirror</b>.</p> <p>Line <math>x = ?</math> is a <b>vertical line</b>.                  Line <math>y = ?</math> is a <b>horizontal line</b>.                  Line <math>y = x</math> is a <b>diagonal line</b>.</p>	<p>Reflect shape C in the line <math>y = x</math></p>
5. Enlargement	<p>The shape will get <b>bigger or smaller</b>. Multiply each side by the <b>scale factor</b>.</p>	<p>Scale Factor = 3 means '3 times larger = multiply by 3'                   Scale Factor = <math>\frac{1}{2}</math> means 'half the size = divide by 2'</p>

<p>6. Finding the Centre of Enlargement</p>	<p>Draw <b>straight lines</b> through <b>corresponding corners</b> of the two shapes. The centre of enlargement is the point <b>where all the lines cross over</b>.</p> <p>Be careful with negative enlargements as the corresponding corners will be the other way around.</p>	<p>A to B is an enlargement SF 2 about the point (2,1)</p>
<p>7. Describing Transformations</p>	<p>Give the following information when describing each transformation:</p> <p>Look at the number of marks in the question for a hint of how many pieces of information are needed.</p> <p>If you are asked to describe a 'transformation', you need to say the <b>name of the type of transformation</b> as well as the other details.</p>	<ul style="list-style-type: none"> <li>- Translation, Vector</li> <li>- Rotation, Direction, Angle, Centre</li> <li>- Reflection, Equation of mirror line</li> <li>- Enlargement, Scale factor, Centre of enlargement</li> </ul>
<p>8. Invariance</p>	<p>A point, line or shape is invariant if it <b>does not change/move</b> when a transformation is performed.</p> <p>An invariant point 'does not vary'.</p>	<p>If shape P is reflected in the <math>y - axis</math>, then exactly one vertex is invariant.</p>

Topic/Skill	Definition/Tips	Example
1. Parallel	Parallel lines never meet.	
2. Perpendicular	Perpendicular lines are at right angles. There is a 90° angle between them.	
3. Vertex	A corner or a point where two lines meet.	
4. Angle Bisector	<p><b>Angle Bisector: Cuts the angle in half.</b></p> <ol style="list-style-type: none"> <li>1. Place the sharp end of a pair of compasses on the vertex.</li> <li>2. Draw an arc, marking a point on each line.</li> <li>3. Without changing the compass put the compass on each point and mark a centre point where two arcs cross over.</li> <li>4. Use a ruler to draw a line through the vertex and centre point.</li> </ol>	<p>Angle Bisector</p>
5. Perpendicular Bisector	<p><b>Perpendicular Bisector: Cuts a line in half and at right angles.</b></p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on A.</li> <li>2. Open the compass over half way on the line.</li> <li>3. Draw an arc above and below the line.</li> <li>4. Without changing the compass, repeat from point B.</li> <li>5. Draw a straight line through the two intersecting arcs.</li> </ol>	<p>Line Bisector</p>
6. Perpendicular from an External Point	<p>The <b>perpendicular distance</b> from a point to a line is the <b>shortest distance</b> to that line.</p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on the point.</li> <li>2. Draw an arc that crosses the line twice.</li> <li>3. Place the sharp point of the compass on one of these points, open over half way and draw an arc above and below the line.</li> <li>4. Repeat from the other point on the line.</li> </ol>	

	<p>5. Draw a straight line through the two intersecting arcs.</p>	
<p>7. Perpendicular from a Point on a Line</p>	<p>Given line PQ and point R on the line:</p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on point R.</li> <li>2. Draw two arcs either side of the point of equal width (giving points S and T)</li> <li>3. Place the compass on point S, open over halfway and draw an arc above the line.</li> <li>4. Repeat from the other arc on the line (point T).</li> <li>5. Draw a straight line from the intersecting arcs to the original point on the line.</li> </ol>	
<p>8. Loci and Regions</p>	<p>A <b>locus</b> is a <b>path of points that follow a rule</b>.</p> <p>For the locus of points <b>closer to B than A</b>, create a <b>perpendicular bisector</b> between A and B and shade the side closer to B.</p> <p>For the locus of points <b>equidistant from A</b>, use a compass to draw a <b>circle</b>, centre A.</p> <p>For the locus of points <b>equidistant to line X and line Y</b>, create an <b>angle bisector</b>.</p> <p>For the locus of points a set <b>distance from a line</b>, create <b>two semi-circles</b> at either end joined by <b>two parallel lines</b>.</p>	
<p>9. Equidistant</p>	<p>A point is equidistant from a set of objects if the <b>distances between that point and each of the objects is the same</b>.</p>	

Topic/Skill	Definition/Tips	Example
1. Probability	The <b>likelihood/chance</b> of something happening.  Is expressed as a number <b>between 0 (impossible) and 1 (certain)</b> .  Can be expressed as a fraction, decimal, percentage or in words (likely, unlikely, even chance etc.)	
2. Probability Notation	<b>P(A)</b> refers to the <b>probability that event A will occur</b> .	P(Red Queen) refers to the probability of picking a Red Queen from a pack of cards.
3. Theoretical Probability	$\frac{\text{Number of Favourable Outcomes}}{\text{Total Number of Possible Outcomes}}$	Probability of rolling a 4 on a fair 6-sided die = $\frac{1}{6}$ .
4. Relative Frequency	$\frac{\text{Number of Successful Trials}}{\text{Total Number of Trials}}$	A coin is flipped 50 times and lands on Tails 29 times.  The relative frequency of getting Tails = $\frac{29}{50}$ .
5. Expected Outcomes	To find the number of expected outcomes, <b>multiply the probability by the number of trials</b> .	The probability that a football team wins is 0.2 How many games would you expect them to win out of 40?  $0.2 \times 40 = 8 \text{ games}$
6. Exhaustive	Outcomes are <b>exhaustive</b> if they <b>cover the entire range of possible outcomes</b> .  The <b>probabilities</b> of an <b>exhaustive</b> set of outcomes <b>adds up to 1</b> .	When rolling a six-sided die, the outcomes 1, 2, 3, 4, 5 and 6 are exhaustive, because they cover all the possible outcomes.
7. Mutually Exclusive	Events are mutually exclusive if they <b>cannot happen at the same time</b> .  The <b>probabilities</b> of an exhaustive set of <b>mutually exclusive</b> events <b>adds up to 1</b> .	Examples of mutually exclusive events: - Turning left and right - Heads and Tails on a coin  Examples of non mutually exclusive events: - King and Hearts from a deck of cards, because you can pick the King of Hearts
8. Frequency Tree	A diagram showing how information is categorised into various categories.  The <b>numbers</b> at the ends of branches tells us how often something happened ( <b>frequency</b> ).	

	The <b>lines</b> connected the numbers are called <b>branches</b> .																																																		
9. Sample Space	The <b>set of all possible outcomes</b> of an experiment.	<table border="1"><tr><td>+</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td></tr><tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td></tr><tr><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td></tr><tr><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td></tr><tr><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr><tr><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td></tr><tr><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td><td>12</td></tr></table>	+	1	2	3	4	5	6	1	2	3	4	5	6	7	2	3	4	5	6	7	8	3	4	5	6	7	8	9	4	5	6	7	8	9	10	5	6	7	8	9	10	11	6	7	8	9	10	11	12
+	1	2	3	4	5	6																																													
1	2	3	4	5	6	7																																													
2	3	4	5	6	7	8																																													
3	4	5	6	7	8	9																																													
4	5	6	7	8	9	10																																													
5	6	7	8	9	10	11																																													
6	7	8	9	10	11	12																																													
10. Sample	A <b>sample</b> is a small selection of items from a population.  A sample is <b>biased</b> if individuals or groups from the population are not represented in the sample.	A sample could be selecting 10 students from a year group at school.																																																	
11. Sample Size	The larger a sample size, the closer those probabilities will be to the true probability.	A sample size of 100 gives a more reliable result than a sample size of 10.																																																	

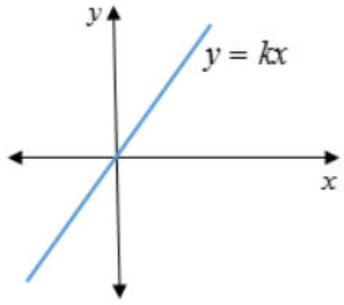

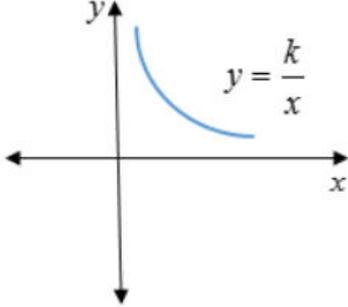

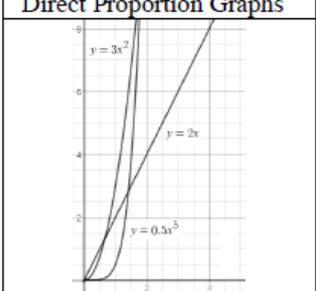

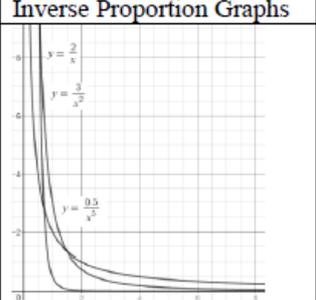

Topic/Skill	Definition/Tips	Example
1. Tree Diagrams	<p>Tree diagrams show <b>all the possible outcomes</b> of an event and calculate their probabilities.</p> <p><b>All branches must add up to 1 when adding downwards.</b> This is because the <b>probability of something not happening is 1 minus the probability that it does happen.</b></p> <p><b>Multiply</b> going across a tree diagram.</p> <p><b>Add</b> going down a tree diagram.</p>	
2. Independent Events	The outcome of a <b>previous event does not influence/affect the outcome of a second event.</b>	An example of independent events could be <u>replacing</u> a counter in a bag after picking it.
3. Dependent Events	The outcome of a <b>previous event does influence/affect the outcome of a second event.</b>	An example of dependent events could be not replacing a counter in a bag after picking it. ' <u>Without replacement</u> '
4. Probability Notation	<p><b>P(A)</b> refers to the <b>probability that event A will occur.</b></p> <p><b>P(A')</b> refers to the <b>probability that event A will <u>not</u> occur.</b></p> <p><b>P(A ∪ B)</b> refers to the <b>probability that event A <u>or</u> B <u>or</u> both will occur.</b></p> <p><b>P(A ∩ B)</b> refers to the <b>probability that <u>both</u> events A and B will occur.</b></p>	<p>P(Red Queen) refers to the probability of picking a Red Queen from a pack of cards.</p> <p>P(Blue')</p> refers to the probability that you do not pick Blue. <p>P(Blonde ∪ Right Handed) refers to the probability that you pick someone who is Blonde or Right Handed or both.</p> <p>P(Blonde ∩ Right Handed) refers to the probability that you pick someone who is both Blonde and Right Handed.</p>
5. AND rule for Probability	When two events, A and B, are <b>independent:</b>	What is the probability of rolling a 4 and flipping a Tails?
	$P(A \text{ and } B) = P(A) \times P(B)$	$P(4 \text{ and } Tails) = P(4) \times P(Tails)$ $= \frac{1}{6} \times \frac{1}{2} = \frac{1}{12}$
6. OR rule for Probability	When two events, A and B, are <b>mutually exclusive:</b>	What is the probability of rolling a 2 or rolling a 5?
	$P(A \text{ or } B) = P(A) + P(B)$	$P(2 \text{ or } 5) = P(2) + P(5)$ $= \frac{1}{6} + \frac{1}{6} = \frac{2}{6} = \frac{1}{3}$

Topic/Skill	Definition/Tips	Example
1. Ratio	Ratio compares the size of <b>one part</b> to <b>another part</b> .  Written using the ‘:’ symbol.	$3 : 1$ 
2. Proportion	Proportion compares the size of <b>one part</b> to the size of the <b>whole</b> .  Usually written as a fraction.	In a class with 13 boys and 9 girls, the proportion of boys is $\frac{13}{22}$ and the proportion of girls is $\frac{9}{22}$
3. Simplifying Ratios	<b>Divide</b> all parts of the ratio by a <b>common factor</b> .	5 : 10 = 1 : 2 (divide both by 5) 14 : 21 = 2 : 3 (divide both by 7)
4. Ratios in the form 1 : n or n : 1	<b>Divide</b> both parts of the ratio by one of the numbers to make <b>one part equal 1</b> .	$5 : 7 = 1 : \frac{7}{5}$ in the form 1 : n $5 : 7 = \frac{5}{7} : 1$ in the form n : 1
5. Sharing in a Ratio	<b>1. Add</b> the total parts of the ratio. <b>2. Divide</b> the amount to be shared by this value to find the value of one part. <b>3. Multiply</b> this value by each part of the ratio.  Use only if you <b>know the total</b> .	Share £60 in the ratio 3 : 2 : 1.  $3 + 2 + 1 = 6$ $60 \div 6 = 10$ $3 \times 10 = 30, 2 \times 10 = 20, 1 \times 10 = 10$ £30 : £20 : £10
6. Proportional Reasoning	Comparing two things using <b>multiplicative reasoning</b> and applying this to a new situation.  Identify one multiplicative link and use this to find missing quantities.	
7. Unitary Method	Finding the <b>value of a single unit</b> and then finding the necessary value by <b>multiplying</b> the single unit value.	3 cakes require 450g of sugar to make. Find how much sugar is needed to make 5 cakes.  3 cakes = 450g So 1 cake = 150g (÷ by 3) So 5 cakes = 750 g (x by 5)
8. Ratio already shared	Find what <b>one part</b> of the ratio is worth using the <b>unitary method</b> .	Money was shared in the ratio 3:2:5 between Ann, Bob and Cat. Given that Bob had £16, found out the total amount of money shared.  £16 = 2 parts So £8 = 1 part 3 + 2 + 5 = 10 parts, so 8 x 10 = £80
9. Best Buys	Find the <b>unit cost</b> by <b>dividing the price by the quantity</b> . The <b>lowest</b> number is the best value.	8 cakes for £1.28 → 16p each (÷by 8) 13 cakes for £2.05 → 15.8p each (÷by 13) Pack of 13 cakes is best value.

Topic/Skill	Definition/Tips	Example
<p>1. Direct Proportion</p>	<p>If two quantities are in direct proportion, <b>as one increases, the other increases by the same percentage.</b></p> <p>If <math>y</math> is directly proportional to <math>x</math>, this can be written as <math>y \propto x</math></p> <p>An equation of the form <math>y = kx</math> represents direct proportion, where <math>k</math> is <b>the constant of proportionality.</b></p>	
<p>2. Inverse Proportion</p>	<p>If two quantities are inversely proportional, <b>as one increases, the other decreases by the same percentage.</b></p> <p>If <math>y</math> is inversely proportional to <math>x</math>, this can be written as <math>y \propto \frac{1}{x}</math></p> <p>An equation of the form <math>y = \frac{k}{x}</math> represents inverse proportion.</p>	
<p>3. Using proportionality formulae</p>	<p><b>Direct:</b> <math>y = kx</math> or <math>y \propto x</math></p> <p><b>Inverse:</b> <math>y = \frac{k}{x}</math> or <math>y \propto \frac{1}{x}</math></p> <ol style="list-style-type: none"> <li><b>Solve to find <math>k</math></b> using the pair of values in the question.</li> <li><b>Rewrite the equation</b> using the <math>k</math> you have just found.</li> <li><b>Substitute the other given value</b> from the question in to the equation to <b>find the missing value.</b></li> </ol>	<p><math>p</math> is directly proportional to <math>q</math>. When <math>p = 12</math>, <math>q = 4</math>. Find <math>p</math> when <math>q = 20</math>.</p> <ol style="list-style-type: none"> <li><math>p = kq</math> <math>12 = k \times 4</math> so <math>k = 3</math></li> <li><math>p = 3q</math></li> <li><math>p = 3 \times 20 = 60</math>, so <math>p = 60</math></li> </ol>
<p>4. Direct Proportion with powers</p>	<p>Graphs showing <b>direct proportion</b> can be written in the form <math>y = kx^n</math></p> <p>Direct proportion graphs will always start at the origin.</p>	<p style="text-align: center;"><b>Direct Proportion Graphs</b></p> 
<p>5. Inverse Proportion with powers</p>	<p>Graphs showing <b>inverse proportion</b> can be written in the form <math>y = \frac{k}{x^n}</math></p> <p>Inverse proportion graphs will never start at the origin.</p>	<p style="text-align: center;"><b>Inverse Proportion Graphs</b></p> 

Topic/Skill	Definition/Tips	Example
1. Increase or Decrease by a Percentage	<p>Non-calculator: <b>Find the percentage</b> and <b>add</b> or <b>subtract</b> it from the <b>original</b> amount.</p> <p>Calculator: Find the <b>percentage multiplier</b> and multiply.</p>	<p><u>Increase 500 by 20% (Non Calc):</u>  <math>10\% \text{ of } 500 = 50</math>                      so <math>20\% \text{ of } 500 = 100</math>  <math>500 + 100 = 600</math></p> <p><u>Decrease 800 by 17% (Calc):</u>  <math>100\% - 17\% = 83\%</math>  <math>83\% \div 100 = 0.83</math>  <math>0.83 \times 800 = 664</math></p>
2. Percentage Multiplier	The <b>number</b> you <b>multiply</b> a quantity by to <b>increase or decrease</b> it by a <b>percentage</b> .	<p>The multiplier for increasing by 12% is 1.12</p> <p>The multiplier for decreasing by 12% is 0.88</p> <p>The multiplier for increasing by 100% is 2.</p>
3. Reverse Percentage	<p>Find the <b>correct percentage given in the question</b>, then work backwards to <b>find 100%</b></p> <p>Look out for words like <b>'before'</b> or <b>'original'</b></p>	<p>A jumper was priced at £48.60 after a 10% reduction. Find its original price.</p> <p><math>100\% - 10\% = 90\%</math></p> <p><math>90\% = £48.60</math>  <math>1\% = £0.54</math>  <math>100\% = £54</math></p>
4. Simple Interest	Interest calculated as a <b>percentage of the original</b> amount.	<p>£1000 invested for 3 years at 10% simple interest.</p> <p><math>10\% \text{ of } £1000 = £100</math></p> <p>Interest = <math>3 \times £100 = £300</math></p>
