1. Biometric Information Definition

Biometric data is personal information about an individual's physical or behavioural characteristics that can be used to identify that person.

This includes, but is not limited to, their fingerprints, facial shape, retina and iris patterns, and hand measurements.

2. Automated Biometric Recognition Systems

An automated biometric recognition system uses technology which measures an individual's physical or behavioural characteristics by using equipment that operates 'automatically' (i.e. electronically).

Information from the individual is automatically compared with biometric information stored in the system to see if there is a match in order to recognise or identify the individual.

To be recognised, an individual will have been previously subject to "enrolment". This is the process where samples of biometric data, such as fingerprints, are captured from an individual and stored to allow comparison in the future.

Further information can be found at: <https://www.ncsc.gov.uk/collection/biometrics>

3. Why Biometric Information Is Used

1. Biometric systems can be faster than using passwords or manual processes.
2. Biometrics can be more convenient, as they cannot be lost, misplaced or damaged.
3. Biometrics provide additional security as they are more difficult to share, copy or misuse than passwords or cards.

4. Biometrics at Tibshelf Community School

Tibshelf Community School uses biometric information as part of an automated recognition system.

This is used for catering and payment systems. This information is referred to as 'biometric information' (see next paragraph).

Tibshelf Community School enrolls staff and students by capturing their fingerprint.

The image taken is a numeric measurement fed into an algorithm to encrypt the data. The actual image is not stored. The system is one directional, meaning that it is impossible to reverse the process to recreate a fingerprint likeness.

5. Notification and Consultation

Tibshelf Community School will ensure that each parent of a child is notified prior to the use of the child's biometric data as part of an automated biometric recognition system.

Notification will be in line with the requirements detailed in the DfE document "[Protection of biometric information of children in schools and colleges](#)".

6. Biometric Data Classification

Where biometric data is used for identification purposes, it is considered special category data as defined by UK General Data Protection Regulation (UK GDPR) and Data Protection Act 2018 (DPA 2018).

Tibshelf Community School is registered with the ICO as a data controller (or 'data processing fee payer') and complies with data protection legislation and principles. The school will only use biometric data collected lawfully and with appropriate care.

The Protection of Freedoms Act 2012 includes provisions which relate to the use of biometric data in schools, when it is used as part of an automated biometric recognition system.

These provisions are in addition to the requirements of the Data Protection Act 2018 and are laid out in sections 26 to 28 of the Protection of Freedoms Act 2012.

As the data controller, the school is responsible for being able to demonstrate its compliance with these provisions.

7. Data Protection Impact Assessments

'Processing' of biometric data includes obtaining, recording, storing, disclosing, analysing, using, deleting, organising or modifying it.

An automated biometric recognition system processes data when:

1. Biometric data is recorded, for example, capturing a fingerprint via a fingerprint scanner.
2. Storing biometric data on a database or as part of a purchased system.
3. Using the recorded biometric data as part of an electronic process, to identify or recognise individuals.

A Data Protection Impact Assessment (DPIA) will therefore be carried out before any biometric data system is purchased or implemented, assessing any risks to data subjects and the measures the school will take to minimise the risks. This is in line with UK GDPR legal requirements.

The DPIA will document, amongst other things, the purpose of the processing, the lawful basis, and the period of time the biometric data will be retained by the processor.

Biometric data will be retained only for as long as necessary and will be deleted when the individual leaves the school or withdraws consent.

The DPO will oversee and monitor the process of carrying out the DPIA, but the decision to purchase and implement a system will be taken by the Governing Board.

When assessing levels of risk, the likelihood and the severity of any impact on individuals will be considered prior to the processing of any biometric data.

8. Lawful Basis for Processing Biometrics Data

Biometric data is classified as special category data under the UK GDPR and DPA 2018. Therefore, a lawful basis for processing under Article 9 of the UK GDPR will be identified by the school, in addition to a lawful basis under Article 6 of the UK GDPR.

Processing of biometric data requires:

- a lawful basis under Article 6 UK GDPR, and
- a condition under Article 9 UK GDPR.

The school relies on:

- Article 6(1)(e) – Public task; and
- Article 9(2)(a) – Explicit consent.

This requirement for consent for processing children's biometric data is imposed by section 26 of the Protection of Freedoms Act 2012.

The written consent of at least one parent will be obtained before the data is taken from the child and used (i.e. 'processed'). This applies to all pupils in schools and colleges under the age of 18. In no circumstances will a child's biometric data be processed without written consent.

In addition, even if a parent consents, the child may object to the processing of their biometric data or refuse to cooperate with the biometric data collection or use. The child's objection/refusal takes precedence over the parents' consent.

Measures will be put in place to ensure children can still access all services, etc. that the biometric data processing is designed to allow access to, even if they do not have their biometric data processed.

Further information can be found in the ICO guidance on [data protection for education establishments](#). In relation to Facial Recognition Technology, the ICO have published a case study which sets out useful guidance on the data protection implications of such processing.

9. Consent Requirements

9.1 Staff

For staff, biometric data processing will not normally rely on consent as the lawful basis, due to the imbalance of power in the employment relationship. Instead, the school will ensure that any processing is lawful, fair and necessary, and staff will be given the right to object and alternative arrangements will be provided.

9.2 Pupils

Written consent will be sought from at least one parent of any child or young person under the age of 18.

Consent given by one parent will be overridden if the other parent objects in writing to the use of their child's biometric data. Objections will be addressed to the Headteacher.

Parental consent can also be overridden by the child.

For looked after pupils, the LA will be notified, and notification will also be sent to all those caring for the pupil. Written consent will be obtained from at least one carer before the pupil's biometric data can be processed.

9.3 Consent limitations

Where the school only holds contact information for one parent, staff will consider whether any reasonable steps can or will be taken to ascertain the details of the other parent.

The school does not need to notify a particular parent or seek their consent if it is satisfied that:

- The parent cannot be found, after reasonable steps have been taken
- The parent lacks the mental capacity to object or consent.
- Welfare or safeguarding concerns require that a particular parent is not contacted.
- It is not practicable for a particular parent to be contacted.

9.4 Withdrawal of Consent

Where consent is withdrawn by an individual, or the parent of a pupil under 18, biometric data relating to that individual will be erased from the system.

Staff and other adults can object to the collection of their biometric data and can withdraw their consent at any time. If consent is withdrawn any biometric data relating to the individual that has already been captured will be deleted.

9.5 Alternative arrangements

Alternative arrangements will be provided to any individual that does not consent to the processing of their biometric data.

Where an individual objects to taking part in the school's biometric data processing system(s), reasonable alternative arrangements will be provided that allow the individual to access the relevant service.

The school will ensure alternative arrangements do not put an individual (or the parents of pupils) at any disadvantage, create access difficulties or result in additional burdens.

10. Roles and Responsibilities

1. School governors are responsible for reviewing this policy annually.
Governors will also refer to guidance published in relation to the [protection of children's biometric information in schools](#).
2. The Headteacher is responsible for ensuring this policy is communicated to all relevant stakeholders and the provisions in this policy are implemented consistently.
3. The Data Protection Officer (DPO) is responsible for advising on any necessary data protection impact assessment (DPIA) in relation to biometric system(s).
The DPO is also the first point of contact for the ICO.

11. Relevant Legislation

This policy has due regard to all relevant legislation and guidance including, but not limited to, the following:

- Protection of Freedoms Act 2012
- Data Protection Act 2018
- UK General Data Protection Regulation (UK GDPR)
- DfE (2022) 'Protection of biometric information of children in schools and colleges'

This policy operates in conjunction with the following school policies:

- Data Protection Policy
 - Information Security Policy
 - Records Retention Policy
-
